Implementation

Group 9 - Inside No.9:

- Sky Burrows
- Oli Quantrill-Scott
- Daniel Basset
- Erikas Jovaisa
- James Garfield
- Oliver Lockett

List of 3rd-party libraries and assets used, and their licenses

LibGDX [1] & Gdx-liftoff [2]: Apache-2.0LICENSE
This license is permissive, free-to-use, and open-source. A copy is included in our project repository. This license was suitable for our project, because it allowed us to build, modify, and submit our game without paying fees, or opening our source code.

Google Gemini [3] was used to create and refine the HTML and CSS for the project website @index.html.
Content generated from Gemini is under the Google Terms of Service and the Generative AI Prohibited Use Policy [4]. Google does not claim ownership over generated outputs, permitting our group to freely use, modify, host, and submit the HTML and CSS code without licensing fees or copyleft restrictions. However, we are prohibited from misrepresenting the AI output as solely human-created, so AI assistance has been transparently documented in this report.
All generated code was manually reviewed line by line by a group member familiar with HTML to adjust the code and to verify that it only uses standard HTML and CSS syntax, and does not replicate any external copyrighted frameworks or assets.

All features required for Assessment1 have been implemented.
